

APOORV SAHU

+91-6394917636 ◇ Kanpur, U.P.

apoorvsahu199@gmail.com ◇ [LinkedIn](#)

SKILLS

Languages	Go, Java, JavaScript, TypeScript
Backend	Spring Boot, Spring Security, Echo, Node.js, REST APIs, Microservices, Kafka
Frontend	React.js
Databases	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps	AWS, Docker, Jenkins, CI/CD
Tools	Git, Postman

EXPERIENCE

Backend Developer Thriwe	Oct 2025 – Present <i>Delhi</i>
------------------------------------	------------------------------------

- Built and maintained backend services and microservices in Go (Golang) for core business workflows.
- Integrated a third-party payment gateway into the payment service for secure and reliable transaction processing.
- Designed and developed optimized, scalable RESTful APIs for high-performance backend operations.
- Worked extensively with PostgreSQL and MySQL for efficient data handling and query performance optimization.
- Improved API latency by ~66% by parallelizing synchronous operations, implementing a caching layer with proper invalidation, and optimizing database queries and backend logic.
- Resolved a critical production issue where successful payments were not confirming bookings due to webhook failures; implemented a retry mechanism (3 attempts) with a Kafka-based fallback, ensuring eventual consistency between the payment and booking services.
- Investigated and resolved production incidents using logs, debugging, and root cause analysis.

Software Engineer Nagarro	Mar 2023 – Sep 2025 <i>Trainee → Associate Engineer → Engineer — Remote</i>
-------------------------------------	--

- Developed scalable microservices using Spring Boot and Spring Security with JWT-based authentication.
- Built REST APIs using Node.js and AWS Lambda for a high-traffic mobile application.
- Reduced API latency by up to 30% by eliminating redundant internal service calls and implementing efficient caching strategies.
- Improved backend performance through database query optimization, service-layer improvements, and asynchronous processing.
- Built React.js front-end components with features like infinite scrolling and multi-language support.
- Monitored application performance and logs using AWS CloudWatch to ensure system stability and reliability.
- Completed structured training in Java, Spring Boot, React, and AWS, and worked on hands-on assignments to strengthen backend and frontend development fundamentals.

PROJECTS

Distributed Job Processing System – Go, Redis, PostgreSQL, Prometheus, Docker

- Built a production-grade async job processor (Sidekiq-like) supporting multi-queue processing with priority scheduling via Redis sorted sets and REST APIs for job submission and status tracking.
- Implemented crash-safe at-least-once delivery using PostgreSQL `SKIP LOCKED` for concurrent dequeue and a visibility timeout reaper to recover stalled jobs from crashed workers.
- Designed retry mechanism with exponential backoff, dead-letter queue for exhausted jobs, and idempotency key deduplication to ensure safe handler re-execution.
- Instrumented with Prometheus metrics (queue depth, job latency histograms, worker utilization) and structured logging; containerized with Docker Compose for local orchestration.

EDUCATION

B.Tech (IT) , PSIT College Of Engineering, Kanpur, Uttar Pradesh (CGPA: 8.92)	2019 – 2023
Class 12th (CBSE) , Jawahar Navodaya Vidyalaya, Kanpur Nagar	2016 – 2017
